

dbh Logistics IT AG and SAP® have joined forces

Bremen, May 2010

dbh Logistics IT AG, a software and consulting company for customs clearance, export control and logistics, has become a new service partner of SAP Deutschland AG & Co. KG. The two companies will support each other in offering dbh clients who have been using SAP® for years a significant enhancement of their logistics and compliance capabilities.

With approximately 97,000 clients worldwide, SAP® is the leading provider of corporate software. “The co-operation is designed to satisfy the growing client needs for a wider range of SAP® solutions and specialist SAP® consultation,” says Reimund Ott, CEO at dbh Logistics IT AG. It was therefore seen as a logical step for the company to equip its own software solutions with standardised SAP® interfaces.

A Dynamic Co-operation

dbh Logistics IT AG has been offering its clients customised solutions over for 35 years. With immediate effect the company can add SAP Business Objects Global Trade Services as part to its portfolio and in future will be able to offer SAP Transportation Management (TM) solutions, which includes standardised SAP® interfaces (plug-ins) for ATLAS Export, ATLAS Import, EMCS and Compliance.

“The new partnership with SAP® brings further focus to bear on SAP Business Objects Global Trade Services, SAP Transportation Management (TM) and the SAP® integration of our own software solutions into the dbh product portfolio. We have already equipped three of our solutions with SAP® interfaces and can also offer extensive consultancy services in this special field”, explains Martin de Vries, Vice President of Customs Solutions and Logistics Consulting at dbh Logistics IT AG. “We call this: SAP® and Advantage Customs competences growing together”.

In the area of consulting, dbh is supported by BTIM Unternehmensberatung GmbH. The two companies have built up a new logistics consulting department within dbh which, in addition to the provision of interfaces, lends support in the design of complete process chains by providing individual SAP® consulting services.

“SAP® services are part of the most important growth areas at dbh and underline the importance of this service partnership. With our plug-ins we are also able to simplify process landscapes for SAP® clients and to provide interfaces to our solutions for customs and port clearance. We will always be able to reflect the latest SAP® developments” stresses Reimund Ott, CEO at dbh Logistics IT AG.
