

# Factsheet International Strategy

## dbh Logistics IT AG - International Strategy

Successive reduction of duty rates and lowering of administrative barriers open-up new opportunities and scopes of action worldwide. The World Customs Organization (WCO) considers a prompt, cost-efficient and predictable border processing as a key driver for continued growth and development of international trade in the years to come.

Within the European Union the harmonisation efforts in terms of customs procedures, intra-customs-communication and schemes like AEO (Authorised Economic Operator), EORI-Number (Economic Operators Registration and Identification) or SEA (Single European Authorisation) enable companies to carry out cross-border customs clearances more easily. In the course of the harmonized export procedure AES/ECS port community systems and national customs systems have been linked together more closely.

**dbh Logistics IT AG seizes this opportunity.** For several years our company has been engaged in international. Increase the transparency of your supply chain, simplify the time-consuming communication with your transport partners and easily integrate new requirements into your existing IT landscape in a timely manner. dbh offers you comfortable solutions.

Advantage Customs is your central platform for European customs clearance. Your advantage: you only have to maintain one interface from your ERP-system or your logistics software and Advantage Customs takes care of the customs declarations in the required European countries.

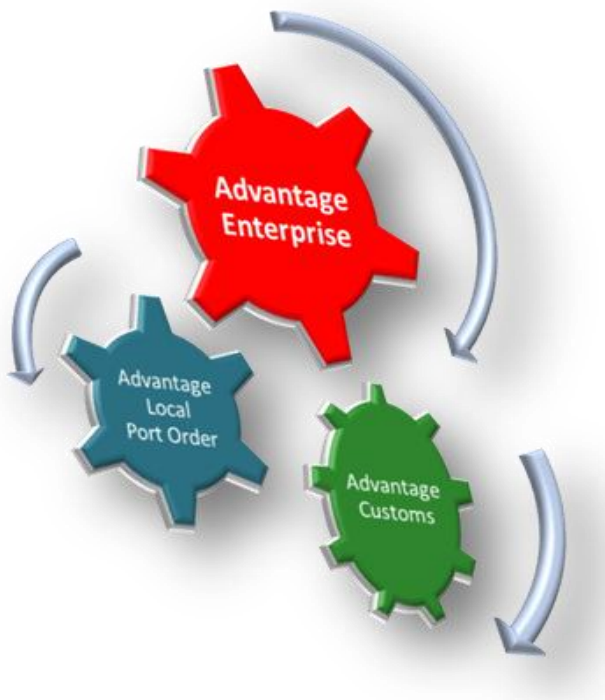

In addition to country-specific implementation of individual customs procedures, another project is currently in the realization: Advantage Pre-Declaration. Core of the new application is the EU Entry

Summary Declarations. Pursuant to the requirements of the Import Control Systems (ICS) from 1st January 2010, all goods which are brought into the territory of the European Union, has to be reported within specified periods before loading at the port of departure or prior to reaching the EU's first point of entry.

Advantage Pre-Declaration can be used as an additional module within Advantage Customs or as a separate application.

Just as Advantage Customs operates Advantage Local Port Order (ALPO), when it comes to handling port orders. You can use the system as an integrated solution or stand-alone.

Currently dbh offers connections to the Dutch, Spanish and German port community systems, links to the Belgian and Danish systems are in preparation. Continuously more port community systems are integrated.

Our Logistics Software Enterprise Advantage provides direct integration of the above-described Services from customs and port area. This will ensure the best possible order processing.

All of our solutions, you can install locally or use as our state of the art data center. The implementation of individual or standardized interfaces belongs to our daily business. You can decide on the depth of integration: from pure data acquisition with a manual post-acquisition to fully automated process as a black box system.

No matter which option you decide to use, with dbh, you have one contact for integration, support and maintenance - so you can concentrate on your daily business.

**dbh Logistics IT AG - think global - act local.**
